- 2) Sharing with other users or groups possible
- 3) Sharing with other users possible

Example cases for the different accounts

SUPERVISOR

The professional or commercial biofeedback trainer has a SUPERVISOR account so that he can create procedures individually for his clients and share them with the clients via the cloud. He can also create different groups and add his clients individually to them. He can monitor and analyze his clients' measurements over a longer period of time.

PREMIUM PLAN

The client who wants to work with a (professional) trainer and wants to have all functions has a PREMIUM PLAN. This enables the client to share his recordings (both of free measurements and of procedures) with the trainer and other users. He can also upload his own procedures to the cloud and have them analyzed or adapted by the SUPERVISOR (trainer).

BASIS PLAN

The client who wants to work with a (professional) trainer needs at least this account so that he can share his notes with the trainer (SUPERVISOR).

WITHOUT PLAN

Anyone who just wants to try the app does not need to join a plan to test the functionality of the app.
